

The Juarez, Mexico operation.

Sensus de Mexico is our mechanical instrument assembly facility specializing in the Sensus Intelligent Communications Encoder (ICE) register for our full line of water meters and the Sensus Direct Read (DR) gas index for our diaphragm gas meters.

The Juarez plant is approximately 50,000 square feet. It employs 166 hourly and 13 salaried workers.

Assembly work on our mechanical instruments is based on the lean cell concept utilizing the Kanban inventory control system.

Our Juarez facility is a model of efficiency. Ask your distributor or territory manager to arrange a tour for a first-hand experience of the quality work performed here.
